Alliance Heavy-Duty Alternators

General Product Information

Looking for dependability? Alliance remanufactured alternators meet or exceed OE standards because they're remanufactured using processes similar to the original equipment processes used for new alternators. Our remanufactured alternators are built with components that are gauged, sorted, tested, and renewed to OE quality specifications, and with vital new parts, as required. Every component and part must meet strict Alliance standards.

Scheduled laboratory testing of alternators from the assembly line includes a comprehensive "hot performance" test that compares an alternator's performance with the OE-quality standards established for its particular applications.

Alliance alternators are designed for customers who demand reliability and performance. Alliance premium remanufactured alternators are designed for eased installation to provide cranking performance you can count on.

Alternators Product Sheet

Alliance Alternators Training - 2024

Product Highlights

- Alliance remanufactured alternators meet or exceed OE Standards- these are remanufactured with in-process inspections/tests throughout the production process
- Alternator bearings, brushes, and brush springs are replaced with New
- Rotors are electronically tested for amperage in insulation quality or replaced with new
- Rotor slip rings are machined and checked for concentricity or replaced with New
- Stators are tested for insulation quality, phase balance and amp output or replaced with New

- Regulators are electronically tested to OE specifications or replaced with NEW
- All alternator units are performance tested to measure output curve, turn on speed and other critical specifications with test reports enclosed with the product.
