ALLIANCE PARTS

# Alliance Air Springs

The program offers premium air springs. Direct replacement of the OEM models, built from high quality materials using environment friendly manufacturing process.

Alliance Air Spring Competitive Advantage

Alliance Air Springs - New Parts Expansion

## Product Highlights

### Easy replacement
The design of the top plates and bases is the same as the OEM which makes installation quick and easy.

### High quality rubber
This allows perfect operation on different road conditions and in wide temperature range (-40F to 158F).

### Last over 5,000,000 cycles
Our air springs are tested to last over 5,000,000 cycles.

### Zinc-coated, not painted
Top plates and steel pistons are zinc-coated, not painted, which guarantees longer-lasting corrosion resistance under the most severe conditions.

### Manufactured under environmentally- friendly processes, which produces less raw material waste.

## Heavy Duty top plates

The Alliance Air Spring top plates are 4mm thick, against 3mm or less from our competitors. This increases the overload resistance by 27%, significantly reducing the warranty claims

## Superior Availability

- Manufacturing 100% verticalized, meaning every single sub-component is manufactured in house, significantly reducing backorders

- Stock available in North America for all part numbers
