Alliance Composite Radiators Sales Sheet

Alliance Parts List with Application and Cross-Reference

Composite Radiators

Alliance Composite Radiators provide a value offering without compromising quality. Each radiator is individually leak-tested and manufactured to meet or exceed original equipment specifications

Product Highlights

Deep-extrusion headers create a stronger joint between the tube and header, offering superior resistance to vibration and thermal expansion, and virtually eliminating tube-to-header leaks

Thermal expansion cuts enhance core flexibility, improving expansion and contraction to extend service life and reduce failure rates

Heavy gauge aluminum tubes are utilized to withstand the stress imposed on the core from vibration, expansion, and retraction

Enhanced crimping designs, including the use of extended header tabs or wave crimping, improve pressure resistance and greatly reduce the risk of tank-to-header leaks

Folded fin edges enhance structural stability and improve heat dissipation efficiency
